

Azure Light Intelligence (ALI) Systems

Technology - The ALI system converts Solar Energy to every form of energy used in the business or home. It is a combination of 5 energy conversion technologies and two energy storage technologies, which produces as many as 7 types of usable energy.

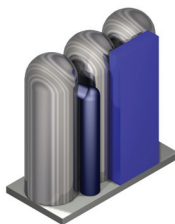

Responsibility - Two energy storage systems make it a true substitute for fossil fuel systems with all weather performance, day or night. It will pay itself off in 10 years not 60 to 100 years like better known solar technologies.

Products & Processes

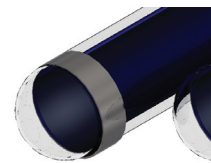

Heat Storage Tanks, Heat transfer Tanks, 2 & 3, Thermal Chiller, Thermoelectric Generator and Hydrogen Burner

Hydrogen Storage

Electric Car Charger or Hydrogen Car Refueling

Solar Thermal Collectors
